Results

The Docxology Template was evaluated through a multi-project pipeline execution, measuring test coverage, pipeline timing, output integrity, and steganographic performance across three heterogeneous exemplar projects.

Multi-Project Pipeline Execution

All three projects were executed through the full eight-stage pipeline using the `run.sh` interactive orchestrator with the "all projects core (fast)" configuration, which skips infrastructure tests and LLM review to isolate project-level performance.

Project	Stages	Duration	Tests	Coverage
`code_project`	7	43.4s	58/58	96.6%
`cognitive_case_diagrams`	7	56.0s	257/257	~96%
`template`	7	22.6s	36/36	90%+

Overall success rate: 100.0% (3/3 projects) **Total pipeline duration**: 121.9s **Average per project**: 40.6s
