# Architecture

## Architecture I

The storybook uses the same Layer-2 project contract as the other public templates:

# Architecture I

- `content/story.yaml` owns cast records and page records.
- `src/storybook/characters.py` validates shape characters.
- `src/storybook/story.py` loads the content file into typed records.
- `src/storybook/illustration.py` renders the full-page scenes.
- `src/storybook/text_layout.py` owns deterministic typography, wrapping, and text overlays.
- `src/storybook/rendering.py` assembles PNG pages into the PDF and writes the manifest.
- `scripts/` contains the thin Stage-02 entry points.

## Architecture I

The page scripts are deliberately repetitive. Their job is visible orchestration: cover, page 1, page 2, and so on. The repetition keeps the creative page surface easy to inspect while preventing scripts from becoming hidden rendering engines.
