

Introduction

Rapidly changing fields require literature reviews that preserve the distinction between what was searched, what was retrieved, what was assessed, and what can be claimed. A single broad query hides phase-specific coverage and makes it difficult to explain how records entered a synthesis. This project treats a literature review as a reproducible data pipeline: configuration defines the review design, source adapters acquire records, analysis modules produce evidence artifacts, and rendering turns those artifacts into an auditable manuscript.

The reporting surface follows the spirit of systematic-review transparency (Page et al. 2021) without implying that the bundled fixture satisfies a domain protocol. A live review must define eligibility criteria, search dates, source coverage, screening procedures, and a domain-appropriate synthesis plan before its results are interpreted.

The bundled configuration targets **Exoplanet Atmospheres**. It defines three ordered phases for foundational methods, JWST-era observations, and molecular detection. The phase labels are configuration, not conclusions: a live review must justify its boundaries and update its claim ledger when the domain or search strategy changes.

Research Questions I

1. How do the different types of research questions (RQs) relate to the different types of research designs (RDs)?
2. How do the different types of RQs relate to the different types of data collection methods (DCMs)?
3. How do the different types of RQs relate to the different types of data analysis methods (DAMs)?
4. How do the different types of RQs relate to the different types of research settings (RSs)?
5. How do the different types of RQs relate to the different types of research participants (RPs)?
6. How do the different types of RQs relate to the different types of research instruments (RIs)?
7. How do the different types of RQs relate to the different types of research outcomes (ROs)?
8. How do the different types of RQs relate to the different types of research ethics (REs)?
9. How do the different types of RQs relate to the different types of research funding (RFs)?
10. How do the different types of RQs relate to the different types of research dissemination (RDs)?
11. How do the different types of RQs relate to the different types of research impact (RIs)?
12. How do the different types of RQs relate to the different types of research evaluation (REs)?
13. How do the different types of RQs relate to the different types of research synthesis (RSs)?
14. How do the different types of RQs relate to the different types of research translation (RTs)?
15. How do the different types of RQs relate to the different types of research implementation (RIs)?
16. How do the different types of RQs relate to the different types of research sustainability (RSs)?
17. How do the different types of RQs relate to the different types of research equity (REs)?
18. How do the different types of RQs relate to the different types of research justice (RJ)?
19. How do the different types of RQs relate to the different types of research inclusion (RI)?
20. How do the different types of RQs relate to the different types of research participation (RP)?
21. How do the different types of RQs relate to the different types of research collaboration (RC)?
22. How do the different types of RQs relate to the different types of research partnership (RP)?
23. How do the different types of RQs relate to the different types of research community (RC)?
24. How do the different types of RQs relate to the different types of research engagement (RE)?
25. How do the different types of RQs relate to the different types of research leadership (RL)?
26. How do the different types of RQs relate to the different types of research governance (RG)?
27. How do the different types of RQs relate to the different types of research accountability (RA)?
28. How do the different types of RQs relate to the different types of research transparency (RT)?
29. How do the different types of RQs relate to the different types of research integrity (RI)?
30. How do the different types of RQs relate to the different types of research excellence (RE)?
31. How do the different types of RQs relate to the different types of research innovation (RI)?
32. How do the different types of RQs relate to the different types of research creativity (CR)?
33. How do the different types of RQs relate to the different types of research imagination (IM)?
34. How do the different types of RQs relate to the different types of research vision (RV)?
35. How do the different types of RQs relate to the different types of research mission (RM)?
36. How do the different types of RQs relate to the different types of research values (RVs)?
37. How do the different types of RQs relate to the different types of research beliefs (RBs)?
38. How do the different types of RQs relate to the different types of research attitudes (RA)?
39. How do the different types of RQs relate to the different types of research emotions (REs)?
40. How do the different types of RQs relate to the different types of research behaviors (RBs)?
41. How do the different types of RQs relate to the different types of research outcomes (ROs)?
42. How do the different types of RQs relate to the different types of research impacts (RIs)?
43. How do the different types of RQs relate to the different types of research contributions (RCs)?
44. How do the different types of RQs relate to the different types of research legacies (RLs)?
45. How do the different types of RQs relate to the different types of research legacies (RLs)?
46. How do the different types of RQs relate to the different types of research legacies (RLs)?
47. How do the different types of RQs relate to the different types of research legacies (RLs)?
48. How do the different types of RQs relate to the different types of research legacies (RLs)?
49. How do the different types of RQs relate to the different types of research legacies (RLs)?
50. How do the different types of RQs relate to the different types of research legacies (RLs)?

Research Questions I

1. **Coverage and retrieval.** Which engines, queries, filters, and identifiers contributed records to each phase, and where are the known coverage limits?
2. **Structure.** How do subfields, topics, authors, venues, and citation links vary across the configured phases?
3. **Evidence.** Which claims are supported by source-backed records, which remain pending, and which are only properties of the synthetic fixture?
4. **Reproducibility.** Can a clean run regenerate the data, figures, reports, and manuscript without unexplained differences?

Scope and contribution I

The project contributes a reusable workflow rather than a domain conclusion. Retrieval and de-duplication preserve source observations; full-text assessment records access status; bibliometrics and graph construction expose descriptive structure; and the claim ledger separates fixture, configured, and source-backed statements. Subjective editorial, scientific, and visual judgments remain explicit review items even when all deterministic gates pass.

Every generated number in the rendered manuscript must come from an artifact listed in the manifest and be traceable to the relevant method stage. Missing, stale, or misclassified evidence is a release finding, not a value to be filled by hand.
