

Introduction

Rapidly changing fields require literature reviews that preserve the distinction between what was searched, what was retrieved, what was assessed, and what can be claimed. A single broad query hides phase-specific coverage and makes it difficult to explain how records entered a synthesis. This project treats a literature review as a reproducible data pipeline: configuration defines the review design, source adapters acquire records, analysis modules produce evidence artifacts, and rendering turns those artifacts into an auditable manuscript.

The reporting surface follows the spirit of systematic-review transparency (Page et al. 2021) without implying that the bundled fixture satisfies a domain protocol. A live review must define eligibility criteria, search dates, source coverage, screening procedures, and a domain-appropriate synthesis plan before its results are interpreted.

The bundled configuration targets **Exoplanet Atmospheres**. It defines three ordered phases for foundational methods, JWST-era observations, and molecular detection. The phase labels are configuration, not conclusions: a live review must justify its boundaries and update its claim ledger when the domain or search strategy changes.

Research Questions I

1. How does the use of social media affect the mental health of teenagers?
2. What are the factors that influence the adoption of renewable energy technologies in rural areas?
3. How does the implementation of remote work policies impact employee productivity and job satisfaction?
4. What are the cultural differences in communication styles between East Asian and Western societies?
5. How does the availability of public transportation affect the daily commute times of urban residents?
6. What are the long-term effects of childhood obesity on adult health outcomes?
7. How does the implementation of artificial intelligence in manufacturing affect the employment of workers?
8. What are the factors that influence the success of small businesses in the digital marketplace?
9. How does the use of virtual reality in education affect student learning outcomes?
10. What are the environmental impacts of large-scale urban development projects?
11. How does the implementation of telemedicine affect the accessibility of healthcare services for rural populations?
12. What are the factors that influence the adoption of electric vehicles in different countries?
13. How does the implementation of flexible work schedules affect employee well-being and productivity?
14. What are the cultural differences in attitudes towards mental health in different societies?
15. How does the availability of affordable housing affect the quality of life of low-income families?
16. What are the long-term effects of childhood vaccination on public health outcomes?
17. How does the implementation of automation in agriculture affect the employment of farm workers?
18. What are the factors that influence the success of startups in the technology sector?
19. How does the use of gamification in corporate training affect employee engagement and learning outcomes?
20. What are the environmental impacts of large-scale infrastructure projects?
21. How does the implementation of digital health records affect the efficiency of healthcare delivery?
22. What are the factors that influence the adoption of sustainable practices in different industries?
23. How does the implementation of remote work policies affect the work-life balance of employees?
24. What are the cultural differences in attitudes towards aging in different societies?
25. How does the availability of public spaces affect the social interaction of urban residents?
26. What are the long-term effects of childhood education on adult cognitive abilities?
27. How does the implementation of artificial intelligence in healthcare affect the diagnosis and treatment of patients?
28. What are the factors that influence the success of social enterprises in different markets?
29. How does the use of virtual reality in therapy affect the treatment of mental health issues?
30. What are the environmental impacts of large-scale agricultural expansion?
31. How does the implementation of telemedicine affect the patient adherence to medical treatments?
32. What are the factors that influence the adoption of renewable energy in different regions?
33. How does the implementation of flexible work schedules affect the job satisfaction of employees?
34. What are the cultural differences in attitudes towards mental health in different societies?
35. How does the availability of affordable housing affect the economic stability of low-income families?
36. What are the long-term effects of childhood vaccination on public health outcomes?
37. How does the implementation of automation in manufacturing affect the employment of workers?
38. What are the factors that influence the success of small businesses in the digital marketplace?
39. How does the use of gamification in corporate training affect employee engagement and learning outcomes?
40. What are the environmental impacts of large-scale infrastructure projects?
41. How does the implementation of digital health records affect the efficiency of healthcare delivery?
42. What are the factors that influence the adoption of sustainable practices in different industries?
43. How does the implementation of remote work policies affect the work-life balance of employees?
44. What are the cultural differences in attitudes towards aging in different societies?
45. How does the availability of public spaces affect the social interaction of urban residents?
46. What are the long-term effects of childhood education on adult cognitive abilities?
47. How does the implementation of artificial intelligence in healthcare affect the diagnosis and treatment of patients?
48. What are the factors that influence the success of social enterprises in different markets?
49. How does the use of virtual reality in therapy affect the treatment of mental health issues?
50. What are the environmental impacts of large-scale agricultural expansion?

Research Questions I

1. **Coverage and retrieval.** Which engines, queries, filters, and identifiers contributed records to each phase, and where are the known coverage limits?
2. **Structure.** How do subfields, topics, authors, venues, and citation links vary across the configured phases?
3. **Evidence.** Which claims are supported by source-backed records, which remain pending, and which are only properties of the synthetic fixture?
4. **Reproducibility.** Can a clean run regenerate the data, figures, reports, and manuscript without unexplained differences?

Scope and contribution I

The project contributes a reusable workflow rather than a domain conclusion. Retrieval and de-duplication preserve source observations; full-text assessment records access status; bibliometrics and graph construction expose descriptive structure; and the claim ledger separates fixture, configured, and source-backed statements. Subjective editorial, scientific, and visual judgments remain explicit review items even when all deterministic gates pass.

Every generated number in the rendered manuscript must come from an artifact listed in the manifest and be traceable to the relevant method stage. Missing, stale, or misclassified evidence is a release finding, not a value to be filled by hand.
