References

References I

The bibliography lives in `manuscript/references.bib` and is read by Pandoc during PDF rendering. Every `[@key]` citation in the manuscript is resolved against that file, so the reference list below is generated from the cited entries rather than maintained by hand.

To validate that `references.bib` is syntactically clean and has the required fields per entry type, run from the repository root:

References I

```
uv run python -m infrastructure.reference.citation.cli vali
    projects/templates/template_registered_report/manuscrip
```
