

Appendix: Exemplar Project Summary I

Table 1: Three representative workspaces under `projects/templates/` illustrating heterogeneous domains while sharing Layer 1. This is a hand-picked sample, not the full roster: the complete public exemplar set is enumerated dynamically from `PUBLIC_PROJECT_NAMES` and listed below.

Appendix: Exemplar Project Summary II

The full public exemplar roster is: `templates/template_active_inference`, `templates/template_advanced_literature_review`, `templates/template_autopoiesis`, `templates/template_autoresearch_project`, `templates/template_autoscientists`, `templates/template_code_project`, `templates/template_data_descriptor`, `templates/template_eda_notebook`, `templates/template_formal`, `templates/template_gold_refinement`, `templates/template_literature_meta_analysis`, `templates/template_madlib`, `templates/template_methods_paper`, `templates/template_newspaper`, `templates/template_pitch_deck`, `templates/template_pools_rules_tools`, `templates/template_prose_project`, `templates/template_redacted_report`, `templates/template_registered_report`, `templates/template_search_project`, `templates/template_sia`, `templates/template_storybook`, `templates/template_template`, `templates/template_textbook`. The three rows below are a representative sample; a future `exemplar_summary_table` token in `build_manuscript_metrics_dict` would let this table cover every exemplar without hand-editing
